

CURAPLEX® VENTED T.O.C.S. (TACTICAL OCCLUSIVE CHEST SEAL)

 curaplex®

ORDERING INFORMATION

1215-22196

Curaplex Vented T.O.C.S.

The Curaplex Vented T.O.C.S. includes two chest dressings to treat open chest wounds. Each pouch includes (1) H*VENT designed to relieve pressure from an open chest wound due to air in the chest (pneumothorax) or bodily fluid (hemothorax) as well as (1) non-vented dressing. Large pull tabs and flexible material are used to help facilitate application and repositioning on the trauma site if required.

Package Dimensions: 8.25" x 8.25"

Package Weight: 3.1 oz

5 Year Shelf Life

Sterile Unless Damaged or Opened

FEATURES & BENEFITS:

- Contains (1) H*VENT chest seal and (1) non-vented occlusive seal for both entrance and exit wounds
- Multi-directional vented dressing allows the fluids to “drain towards gravity,” allowing patient to be transported on his or her side.
- Backup fail-safe system since there are 6 ports. Even if 5 become obstructed, the vent will remain fully operational.
- Unique dome membrane design creates a complete seal around the wound area, ensuring a complete seal around the wound and reducing the risk of air or fluid finding alternate paths.
- Large vent openings on the H*VENT allow for visual monitoring of the wound.
- The dome design gives quick indication of air or fluid leaving the chest (billows up) or when the seal is in place (sucks down).
- Proven in internal testing to retain a seal during inhalation and to maintain a sustainable negative pressure (below ambient pressure) within the pleural space.
- Lowest profile of any vented chest seal and easy to fold.
- Tested to be effective on temperatures of -40°F to 161°F
- Latex-free
- Made in the USA
