The LIFEPAK 20 defibrillator/monitor is the ideal crashcart defibrillator putting early, effective defibrillation into the hands of BLS responders while transitioning easily to full therapy and monitoring capabilities for the ALS-trained code team.

The world leader in defibrillation technology brings you the improved LIFEPAK 20 defibrillator/monitor, created especially for hospitals and clinics. Designed with extensive input from clinicians around the world, the 20 is simple yet sophisticated, providing a flexible and effective tool to meet diverse defibrillation and monitoring needs.

User Enhancements
The 20 is highly intuitive, making it easy for infrequent AED-trained responders to quickly understand and use. Our proven Shock Advisory System™ guides the user with voice and visual prompts through each step and simple 1-2-3 operation. With an easy push of a latch, the 20 automatically converts to a manual defibrillator, including waveform displays. In manual mode, all of the advanced cardiovascular life support tools become available. The 20 offers noninvasive pacing, Masimo SET pulse oximetry (SpO₂), ECG monitoring (3- or 5-wire), and synchronized cardioversion.

Designed for indoor use, the 20 is compact, lightweight, and easy to rush to the scene or use during transport. A convenient, optional docking station enables the device to be firmly attached to the crash cart for safe and rapid transport, or easily released—whatever the situation requires. The docking station swivels, for multiple viewing angles.

Superb color graphics, easily viewed from many angles, enable clinicians to clearly see color matched waveforms and values for efficient and informed patient care decisions.

Options
• Masimo® SET® pulse oximetry
• Noninvasive pacing
• QUIK-COMBO® electrodes or hard paddles
• Docking station

Features
AHA/ERC Guidelines 2005 consistent
cprMAX™ technology
Simple yet sophisticated for responders of many skill levels
Highly intuitive for quick, effective AED use
Easily converts to manual mode
ADAPTIV™ biphasic technology adjusts shock duration and voltage
Broad dosage capability up to 360J, when needed
Compact and lightweight for easy carrying and versatile use
Superb color graphics allow easy viewing from many angles
Flexible therapy options (See options below)
Easy to maintain and service
The LIFEPAK 20 defibrillator/monitor has seven main operating modes:

**Manual Mode**: Provides a normal operating capability for ALS users. Allows access to manual mode energy selections up to 360J, synchronous cardioversion and pacing. ECG waveform is displayed.

**AED Mode**: (Consistent with 2005 AHA Guidelines for CPR and ECC and ERC Guidelines for Resuscitation 2005,) Provides a normal operating capability for BLS users. All user features are available except manual defibrillation, synchronous cardioversion, pacing, and access to archived patient records. Provides shock energy defaults up to 360J. User selectable option to display ECG waveforms and/or visual AED prompts.

**Setup Mode**: Allows the operator to configure the device settings.

**Service Mode**: Allows the operator to execute diagnostic tests and calibrations, to display device module software and hardware versions, and to display and print the diagnostic code log.

**Inservice Mode**: Simulated waveforms are available for demonstration purposes. The waveforms consist of short segments of realistic data, which are repeated to form a continuous waveform.

**Archive Mode**: Provides operator the opportunity to access records of previous patients for review, transmission, printing, editing or deletion.

**Auto Test Mode**: Performs daily self tests.

**Daily Auto Test**: Each day at approximately 0300 (3:00 am), the 20 automatically completes the following tasks:

- Turns itself on.
- Performs self-tests.
- Charges to a low energy level and then discharges through a test load.
- Tests the pacning circuitry (if noninvasive pacing installed).
- Turns itself off.

**POWER**

The device is an AC line operated device with an internal battery as backup.

**AC Powered**: 90–132 VAC 50/60Hz, 198–264 VAC 50/60 Hz, total power draw less than 120 volt-amperes (VA).

**Internal Battery Backup**: NiMh. Batteries charge while AC Powered: 90–132 VAC 50/60Hz, total power draw less than 120 volt-amperes (VA).

**Operating Time**: A new fully charged internal backup battery will provide the following prior to shutdown:

<table>
<thead>
<tr>
<th>Activity</th>
<th>Time (minutes)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total</td>
<td>120</td>
</tr>
<tr>
<td>After Low Battery</td>
<td>5</td>
</tr>
<tr>
<td>Monitoring [minutes]</td>
<td>135</td>
</tr>
<tr>
<td>Defibrillation [36J discharges]</td>
<td>90</td>
</tr>
<tr>
<td>Monitoring plus pacing (Minutes at 100 ma, 60 ppm)</td>
<td>70</td>
</tr>
</tbody>
</table>

**Typical Battery Charge Time**: <2 hours when device is powered off and AC power is applied.
**PRINTER**

Prints continuous strips of the displayed patient information.

- **Paper size:** 50 mm (2.0 in)
- **Print speed:** Continuous ECG 25 mm/sec +/- 5% (measured in accordance with AAMI EC-11, 4.2.5.2)
- **Autoprint:** Waveform events print automatically (user configurable)
- **Delay:** 8 seconds
- **Print Speed for CODE SUMMARY Reports:** 25 mm/sec

**FREQUENCY RESPONSE**

- **Diagnostic:** 0.05 to 150 Hz or 0.05 to 40 Hz (user configurable)
- **Monitor:** 0.67 to 40 Hz or 1 to 30 Hz (user configurable)
- **Paddles:** 2.5 to 30 Hz
- **Analog ECG Output:** 0.67 to 32 Hz (except 2.5 to 30 Hz for paddles ECG)

**DEFIBRILLATOR**

- **Waveform:** Biphasic Truncated Exponential.
- **Energy Accuracy:** +/- 1 joule or 10% of setting, whichever is greater, into 50 ohms ±2 joule or 15% of setting, whichever is greater, into any impedance from 25–100 ohms.
- **Voltage Compensation:** Active when disposable therapy electrodes are attached. Energy output within ± 5% or ± 1 joule, whichever is greater, of 50 ohm value, limited to the available energy which results in the delivery of 360 joules into 50 ohms.
- **Patient Impedance:**
  - **Phase 1**
    - **Duration (ms):** Min. 5.1, Max. 6.0, 3.4, 4.0
    - **Phase 2**
    - **Duration (ms):** Min. 5.8, Max. 7.9, 4.5, 5.3
- **Paddle Options**
  - QUIK-COMBO pacing/defibrillation/ECG electrodes (standard)
  - Standard adult paddles with embedded pediatric paddles (optional)
  - Internal handles with discharge control (optional)
  - External sterilizable paddles (optional)
  - FAST-PATCH disposable defibrillation/ECG electrodes (optional)
- **Cable length:** 2.44 meter (8-foot) long QUIK-COMBO cable (not including electrode assembly)

**MANUAL**

- **Energy Select:** 2, 3, 4, 5, 6, 7, 8, 9, 10, 15, 20, 30, 50, 70, 100, 125, 150, 175, 200, 225, 250, 275, 300, 325, and 360 joules and user configurable sequence of 100–360, 100–360, 100–360.
- **Charge time:**
  - Charge time to 200J <4 seconds with fully charged battery
  - Charge time to 360J <7 seconds with fully charged battery
  - Charge time to 360J <10 seconds while not in low battery operations
- **Synchronous Cardioversion:**
  - Energy transfer begins within 60 ms of the QRS peak
  - Energy transfer begins within 25 ms of the External Sync Pulse
  - External Sync Pulse; 0–5V (TTL Level) Pulse, active High, > 5 ms in duration, no closer than 200 ms apart and no further than 1 second apart

**AED**

- **Shock Advisory System (SAS):** an ECG analysis system that advises the operator if the algorithm detects a shockable or nonshockable ECG rhythm. SAS acquires ECG via therapy electrodes only.
- **Shock Ready Time:** Using a fully charged battery at normal room temperature, the device is ready to shock within 16 seconds of power on, if initial rhythm finding is “Shock Advised.”
- **The AED mode of the LIFEPAK 20 defibrillator/monitor is not intended for use on children less than 8 years of age.**
- **cprMAX technology Setup Options** (items marked with * are default settings):
  - Stack Shock: Off*, On
  - Initial CPR: Off*, Analyze First, CPR First
  - Preshock CPR: Off*, 15, 30, 30 seconds
  - Auto Analyze: Off*, After 1st Shock, On
  - Pulse Check: Never*, After Second No Shock Advised, After Every No Shock Advised, Always
  - CPR Time 1 & 2: 15, 30, 45, 60, 90, 120*, 180 seconds, 30 minutes
- **Users should refer to the LIFEPAK 20 defibrillator/monitor operating instructions for details on how to customize the configuration of their devices to hospital protocols.**

**PACER**

- **Pacing Mode:** Demand or nondemand
- **Rate and current defaults (user configurable):**
  - **Pacing Rate:** 40 to 170 ppm
  - **Rate Accuracy:** +/- 1.5% over entire range
- **Output Waveform:** Monophasic, amplitude stable to +/- 5% relative to leading edge for currents greater than or equal to 40 mA, Duration 20 +/- 1 ms, Rise/Fall times <= 1 ms (10–90% levels)
- **Output Current:** 0 to 200 mA
- **Pause:** Pacing pulse frequency reduced by a factor of 4 when activated
- **Refractory Period:** 200 to 300 ms +/- 3% (function of rate)

**ENVIRONMENTAL**

- **Temperature, Operating:** 5 to 45° C (41 to 113° F)
- **Temperature, Nonoperating:** -20 to +60° C (4 to +140° F) except therapy electrodes
- **Relative Humidity:** 5 to 95%, noncondensing
- **Atmospheric Pressure, Operating:** Ambient to 429 mmHg (0 to 4,572 meters) (0 to 15,000 feet)
- **Water Resistance, Operating (without accessories except for ECG Cable and hard paddles):** IPX1 (spillage) per IEC 60529, Cl. 44.6 (1995)
- **Vibration:** MIL-STD-810E Method 514.4, Cat1
- **Shock (Drop):** 1 drop on each side from 45.72 mm (18 in.) onto a steel surface

- **EMC**
  - IEC 60601-2-4:2002; Clause 36/EN 60601-2-4:2003; Clause 36, Particular Requirements for the Safety of Cardiac Defibrillators and Cardiac Defibrillator monitors
  - All specifications are at 20° C (68° F) unless otherwise stated.
ADAPTIV Biphasic Technology

The 20 is equipped with ADAPTIV biphasic technology, which adjusts the shock waveform duration and voltage based on the patient’s impedance level. In AED mode, the device can provide escalating shocks (200–360 joules), depending on the patient’s needs. In manual mode, the ALS clinician can give energy shocks according to established protocols.

cprMAX Technology

The 20 in AED mode is also equipped with cprMAX technology, which supports the 2005 American Heart Association (AHA) Guidelines for Cardiopulmonary Resuscitation (CPR) and Emergency Cardiovascular Care (ECC) and European Resuscitation Council (ERC) Guidelines for Resuscitation 2005. cprMAX technology is aimed at optimizing the timing and sequencing of CPR and defibrillation. The 20 with cprMAX technology is highly flexible to accommodate various patient and CPR protocol requirements. cprMAX empowers users to customize the interaction of defibrillation and CPR, with options to:

- Provide a specified CPR interval before delivering the first shock.
- Provide CPR while the device is charging.
- Prompt for CPR after each single shock.
- Customize the option for and timing of pulse checks.

Use and Maintenance

QUIK-COMBO pacing/defibrillation/ECG electrodes are compatible with the entire LIFEPAK family of products, for standardization and continuity of care. Standard adult paddles with embedded pediatric electrodes, sterilizable adult paddles, and internal paddles provide flexible therapy options for response in various cardiac emergencies. The 20 is easy to maintain and service, comes with a five-year, in-hospital warranty, and is equipped with AC power and a backup internal nickel metal hydride (NiMh) battery.

The LIFEPAK 20 defibrillator/monitor extends and enhances the LIFEPAK family of products, providing flexible, compatible and standardized defibrillation solutions for patients across a range of hospital settings.
